Davangere, Karnataka - 577004, India

CAREER OBJECTIVE

Entry-level Full Stack Engineer with strong foundation in Java, Spring Boot, REST API development, and SQL. Experienced in building scalable backend systems and full-stack applications using Java, Spring Boot, MySQL, and modern web technologies. Proficient in Git, Maven, and cloud fundamentals with strong understanding of software engineering principles and object-oriented programming. Passionate about developing secure, scalable enterprise applications aligned with banking and financial systems.

EDUCATION

- **Bapuji Institute of Engineering and Technology** *Dec 2022 - Jul 2026*
  Bachelor of Engineering in Computer Science and Engineering Davangere, Karnataka
  - CGPA: 8.55/10

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, SQL, React

AI & Machine Learning: Scikit-learn, NumPy, Pandas, PyTorch, Matplotlib, Data Analysis, Predictive Modeling

Web & Backend Development: HTML, CSS, PHP, REST APIs, Spring Boot, Spring Data JPA, Backend Architecture

Cloud & DevOps: AWS Fundamentals, Azure DevOps, Jenkins, Git, GitHub, Linux

Tools & Platforms: MySQL, Netlify, Maven, Gradle, XAMPP

Software Engineering Concepts: Object-Oriented Programming, Data Structures, API Design, System Design.

PROJECTS & INTERNSHIPS

- **Banking Management REST API** (*Jan 2024 - Mar 2024)*
  Tools: Java, Spring Boot, MySQL, REST API, Maven, Git
  - Developed scalable banking backend system using Java and Spring Boot.
  - Designed and implemented RESTful APIs for account creation and management.
  - Integrated MySQL database using Spring Data JPA for efficient data persistence.
  - Used Maven for dependency management and Git for version control.
- **Hospital Management System** (*Mar 2024 - Jun 2024)*
  Tools: HTML, CSS, MySQL, PHP, JavaScript
  - Developed a full-stack hospital management system to automate patient records, appointment scheduling, and billing.
  - Designed backend database architecture using MySQL to ensure efficient data retrieval and storage.
  - Improved system efficiency by implementing optimized database queries and modular backend logic.
  - Built scalable frontend interfaces for enhanced user experience and workflow automation.
  - **Cafe Management System** (*Oct 2024 - Nov 2024)*
    Tools: Html, CSS, PHP, MySQL, XAMPP
  - Built an automated cafe management system to streamline order processing, inventory tracking, and billing operations.
  - Implemented backend logic, database integration, and real-time data updates to improve operational efficiency.
  - Enhanced system reliability and usability through efficient database design and structured backend development.
- **Blockchain-Based Crowdfunding Platform** (*Sept 2024 - Dec 2024)*
  Tools: PHP, JavaScript, MySQL, Solidity, Netlify
  - Designed and developed a decentralized crowdfunding platform using Solidity smart contracts on the Ethereum blockchain.
  - Implemented secure transaction handling, wallet integration, and blockchain interaction using JavaScript.
  - Built backend logic and database integration to ensure reliable campaign management and user interaction.
  - Improved transaction transparency, data security, and system reliability using decentralized architecture.
  - **PortFolio Optimization Using Machine Learning (***Feb 2025 - May 2025)*
    Tools: Python, Yfinance, NumPy, Pandas, SciPy, Matplotlib
  - Developed a machine learning-based portfolio optimization system to maximize Sharpe Ratio using historical

stock market data.

- Implemented data preprocessing, covariance matrix computation, and performance evaluation using Python and scientific computing libraries.
- Built mathematical models to calculate expected return, portfolio risk, and optimal asset allocation.
- Automated financial data analysis and visualization using Matplotlib, improving decision-making accuracy.
- **AI Copilot Assistant** (Dec 2025- Jan 2026)

  Tools: Python, OpenAI API, Flask, Azure / GitHub

  - Developed scalable backend system using Flask and REST APIs
  - Designed API architecture to handle real-time user requests.
  - Implemented modular backend structure and efficient request handling.
  - Used Git for version control and collaborative development.
  - Demonstrated backend engineering and API development skills.

CLOUD, DEVOPS & AUTOMATION EXPERIENCE

- Used Azure DevOps and Git for version control, code management, and collaborative software development.
- Applied Jenkins concepts for continuous integration and build automation.
- Worked with Linux environments for development, debugging, and system operations.
- Deployed applications using Netlify and managed cloud-based workflows.
- Applied automation techniques to streamline data analysis and processing tasks.

AI & SOFTWARE ENGINEERING EXPERIENCE

- Applied machine learning techniques to analyze data, optimize performance, and automate decision-making systems.
- Developed scalable backend systems and integrated databases for high-performance applications.
- Implemented modular, maintainable, and efficient code using software engineering best practices.
- Gained hands-on experience with Generative AI concepts through Google Generative AI Exchange Program.
- Strong understanding of Data Structures and Algorithms including arrays, linked lists, trees, and sorting algorithms.
- Proficient in Object-Oriented Programming and software design principles.
- Experienced in debugging, troubleshooting, and optimizing software systems.

CORE COMPETENCIES:

- Organizational Skills
- Problem Solving
- Software Debugging
- Backend Development
- AI/ML Development
- Cloud and DevOps

ACHIEVEMENTS AND RECOGNITIONS

- Organized and managed UCL (UniCS Championship League) sports events at BIET DVG, coordinating logistics, team participation, and promoting sportsmanship among students.

- Volunteered as a Technical Support Volunteer for DAVANA at BIET Davangere for 3 consecutive years, providing essential technical assistance in event setups, video shoots, audio-visual support, and troubleshooting to ensure the smooth and successful execution of the cultural fest.

- Successfully completed the Google Generative AI Exchange Program, gaining hands-on experience with cutting-edge generative AI models and applications.

- Completed AWS Fundamentals Training, gaining foundational knowledge of cloud computing concepts, AWS services, and best practices for cloud deployment and used EC2, S3, Lambda practically.
